Re: Proposed Aquatic Herbicide Application for Curlyleaf pondweed and Eurasian watermilfoil control on Little Saint Germain Lake.

Dear Little Saint Germain Lake Property Owner or Occupant:

The Little Saint Germain Lake Protection and Rehabilitation District (the District) with support from the Wisconsin Department of Natural Resources (WDNR), Onterra, LLC., and Clean Lakes, Inc. (CLI) proposes to assess and chemically treat approximately 96 acres on Little Saint Germain Lake to control the excessive growth of the exotic invasive aquatic plants, Curlyleaf pondweed (CLP) and Eurasian watermilfoil (EWM). The District proposes to conduct an application of Aquathol K (liquid endothal) and DMA 4 IVM (liquid 2, 4-D) to be performed by CLI. We anticipate the treatment to occur sometime in early spring, 2014 and will proceed only after the District obtains a permit for the treatment from the Wisconsin Department of Natural Resources.

Notification of the exact dates of treatment and water use restrictions associated with the use of Aquathol K and DMA 4 IVM will be provided by the posting of shoreline in and adjacent to treatment areas, and public access points.

The water use restrictions associated with use of the above pesticide are noted below:

**21 day Irrigation Restriction**

Additional details regarding the proposed treatment including a copy of the permit application and the WDNR aquatic herbicide fact sheets can be found at [www.littlesaint.org](http://www.littlesaint.org).

**For questions about the treatment, please contact:**

Cheryl Kelsey, Little Saint Germain Lake Protection & Rehabilitation District (715) 614-2323
